

POZNAŃ PLAZA REDESIGNED

The interior of the Poznań Plaza shopping centre, which is owned by Klépierre, has been re-opened after refurbishment. All the common areas have been renovated – new floors have been laid in the passageways, while the column housings, balustrades, pilasters, cornices and arches have been replaced. The lighting installations have been designed specifically to order, with three sizes of ring-shaped fittings, each 8m in diameter. A control system has been installed to enable individually programmed lighting settings. The lights have been replaced with energy-efficient LED bulbs. The food court has also been rearranged. The floor, lighting and partitions have been replaced and furniture by Polish designers has been introduced. New leisure zones have been created, as well as a children's area in the food court, which now includes seating for toddlers and high chairs. Waste segregation has also been implemented. Poznań Plaza comprises 140 stores over almost 30,000 sqm, as well as a ten-screen Cinema City. The shopping centre is BREEAM certified.
